

HMX series

end mills for high-hardness steel machining

Lattice heterogeneous coating

Lattice heterogeneous coating added with special elements, with high hardness and excellent high temperature oxidation resistance, more suitable for high hardness materials and high speed machining

Excellent coating processing technology, more closely combined with substrate

New technology
Breakthrough upgrading

- unique edge structure, properly designed chipbreaker, for outstanding cutting performance.
- Orange red coating allows for better wear observation.
- Special after treatment greatly reduces friction, for smoother chip evacuation and superior surface quality.

Perfect high temperature oxidation resistance:

After oxidation at 1100 °C, the coating of HMX series only has a very thin oxide layer, while the similar products of Company A has completely oxidized.

HMX series for machining high hardness steel

2-flute flattened end mills with straight shank and tiny diameter

HMX-2ES

Tiny diameter end mills can fully display high speed and high precision performances of machining center, often used for machining of precision components such as electronic part etc.

Tool type: HM-2BP-R0.3-M08
 Dimensions: R0.3mm
 Workpiece material: S136(52HRC)
 Rotating speed: 30000r/min
 Feed speed: 200mm/min
 Axial cutting depth: $a_p=0.02\text{mm}$
 Radial cutting depth: $a_e=0.04\text{mm}$
 Cutting style: contour machining (mould of car light)
 Cooling system: air blow
 Machine tool: MIKRON HSM 800

End mill	HM-2BP-R0.3-M08	Similar product of company A
Cutting time	300min	180min
Abrasion value	0.025mm	0.048mm

TMM series

end mills for titanium machining

- High flexural strength, can significantly avoid the risks of premature chipping, suitable for titanium alloy materials milling machining
- Polished finish for both flank and rake face improves the surface smoothness, reduces friction, reduces cutting force and temperature, reduces abrasive wear caused by smearing
- Adopted differential pitch structure leads to high-efficiency milling with low vibration.

$\alpha \neq \beta$

Application field

Suitable for Aerospace industries applications or machining titanium alloy parts, improve machining efficiency for the customers;

Suitable for finishing titanium alloy parts in Aerospace industries to improve the dimensional accuracy of the parts.

Longer tool life

Machining component: housings and casings

Workpiece material: TC4

Cutting tool: TM-5R-D16.0R0.5

Cutting parameters: S=720r/min,

F=128~160mm/min,

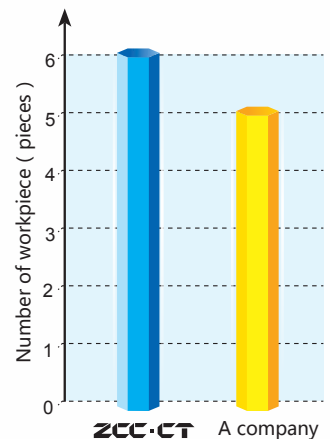

ap=13~15.3mm,

ae=8~16mm

CNC Machine type: planomiller

Method: Slot milling, Side face milling

Cooling method: Emulsion

Test result: ZCC-CT product processed 6 components, product from A company only processed 5 components.

4-flute flattened end mills with straight shank

NM series for copper machining

Outstanding NM milling series, let copper&alloys of copper machining wonderful!

- With super sharp edge, most suitable for high precision machining of copper&alloy of copper.
- With CrN coating which own good lubricating property and small friction coefficient, can realize light cutting processing circle, long tool life and high quality machined surface.

Coat	Hardness(HV)	Friction coefficient	Oxidizing temperature(C°)	Strengthness combined with substrate
CrN	1800	0.25	700	⊙
TiN	2200	0.4	500	⊙
TiCN	2700	0.3	400	○
TiAlN	2800	0.3	800	⊙

⊙ Excellent ○ Normal

Tool: NM-2B-R3.0
 Dimension: R3.0mm
 workpiece material: C1100
 Rotating speed: 8000r/min (150m/min)
 Feed speed: 1200mm/min (0.15mm/r)
 Axial cutting depth: $a_p=0.3\text{mm}$
 Radial cutting depth: $a_e=0.6\text{mm}$
 Cutting style: face milling(down milling) Cooling system : air cooling
 Machine: MIKRON UCP 1000

AL

series end mills for Al machining

● Chip pocket with unique shape exerts excellent performances even in slot and cavity machining.

● Sharp cutting edge and large helical angle design effectively prevent built-up edge.

● Anti-vibration design of whole edge can suppress the chattering during machining and improve surface quality.

Tool type: AL-3E-D6.0
Dimensions: $\varnothing 6.0\text{mm}$
Workpiece material: LC4
Rotating speed: 13000r/min (250m/min)
Feed speed: 1950mm/min (0.15mm/r)
Axial cutting depth: $a_p=9.0\text{mm}$
Radial cutting depth: $a_e=1.0\text{mm}$
Cutting style: Complicated cavity machining
Cooling system: air blow
Machine tool: MIKRON UCP 1000

Even the complicated machining of thin-wall cavity parts can be achieved easily.

2-flute flattened end mills with straight shank

AL-2E

● Good chip removal performance, high machining efficiency.

ALG series

Aluminum machining end mills

ALG series aluminum machining end mills are highly versatile and can achieve efficient cutting of aluminum alloy in various working conditions, with sharp edge design, light and fast cutting, excellent anti-bonding wear performance and high surface quality.

- ▶ Super fine grain carbide matrix, perfect combination of tool wear resistance and cutting edge strength;
- ▶ Special design of the chip tank realizes the perfect unification of tool strength and chip removal performance, which greatly improves the cutting stability;
- ▶ Large rake angle and sharp cutting edge design, effectively avoiding the generation of chip tumors;
- ▶ Optimized design of the flank surface and special surface treatment, the parts are machined with excellent surface quality.

Two cutting edges

Three cutting edges

Application examples

Tool : ALG-3E-D8.0
Processing material: Aluminum alloy(HB110)
Machine: Machining center
Machining type: Side milling
Clamping type: Hydraulic toolholder
Cooling type: Emulsion
Cutting parameters : $n=13000r/min$,
 $f=900mm/min$, $a_p=8mm$, $a_e=0.5mm$

ALG series

S_M

series end mills for machining of hard-to-cut materials such as stainless steel, heat-resistant alloy, etc.

- Large helical and rake angle, sharp cutting edge, unique edge geometry can restrain cutting-heat's influence on tool nose, and greatly improve wear resistance and heat resistance.
- The coating with good heat resistance can achieve stable machining even at high temperature.
- Very suitable for machining of hard-to-cut materials such as stainless steel, Ni substrate high temperature alloy, etc.

Tool type: SM-3E-D6.0
 Dimensions: Ø6mm
 Workpiece material: 1Cr18Ni9Ti
 Rotating speed: 3700r/min (70m/min)
 Feed speed: 555mm/min(0.15mm/r)
 Axial cutting depth: $a_p=9\text{mm}$
 Radial cutting depth: $a_e=0.6\text{mm}$
 Cutting style: side milling (down milling)
 Cooling system: oil water emulsion
 Machine tool: MIKRON UCP 1000

End mills	SM-3E-D6.0	Similar product of company A
Cutting length	100m	100m
Abrasion of peripheral edge	Even abrasion on cutting edge, value is 0.08 mm	Cutting edge is flaked fully, value is 0.135mm

Abrasion condition of peripheral edge

VSM series

End mills with unequal pitch and variable inclined angle;
Revolution on machining materials hard to cut: stainless
steel, heat resistant alloy, etc.

VSM-4E **VSM-4R**
VSM-4EFP **VSM-4RFP**

⚙️ VSM-4E-D12.0 Slotting stainless steel

Machine: MIKRON UCP1000

Chuck: HSK63-A

Machined material: 1Cr18Ni9Ti

Cutting speed: 80m/min

Feed per tooth: 0.05mm/z

Axial cutting depth: 6mm

Radial cutting depth: 12mm

Cooling system: air cooling

Cutting style: slotting

Overhang: 35mm

Note: ◆ Compared with competitor's, VSM end mills can perform better on wear resistance and tool life.

◆ Compared common tools, unequal pitch end mills perform stronger on resisting broken.

SM/VSM series for machining materials hard to cut

3-flute flattened end mills with straight shank

SM-3E

● Large helical angle, for machining of hard-to-cut materials such as Austenite stainless steel, heat-resistant alloy, etc.

Maximum cutting depth										

1. The above table shows the standard value of side milling. When milling slot, 60%~80% of rotating speed and 50%~70% of feed speed stated above are recommended as standard.
2. Please select high-precision machine and tool holder.
3. Please use air blow or cutting liquid with high mist retardant property.
4. Down milling is recommended in the case of side milling.
5. When the machine rigidity and workpiece fixture stability is low, vibration and abnormal noise may be generated. Please reduce the rotating speed and feed speed stated above correspondingly.
6. Make overhang of tool as short as possible in conditions of non-interference.

- The above table shows the standard value of side milling. When milling slot, 50%~70% of rotating speed and 40%~60% of feed speed stated above are recommended as standard.
- Please select high-precision machine and tool holder.
- Please use air blow or cutting liquid with high mist retardant property.
- Down milling is recommended in the case of side milling.
- When the machine rigidity and workpiece fixture stability is low, vibration and abnormal noise may be generated. Please reduce the rotating speed and feed speed stated above correspondingly.
- Make overhang of tool as short as possible in conditions of non-interference.

Solid carbide end mills

Cutting parameters for PML/PM series end mills

- The above table shows the standard value of side milling. When milling slot, 50%~70% of rotating speed and 40%~60% of feed speed stated above are recommended as standard.
- Please select high-precision machine and tool holder.
- Please use air blow or cutting liquid with high mist retardant property.
- Down milling is recommended in the case of side milling.
- When the machine rigidity and workpiece fixture stability is low, vibration and abnormal noise may be generated. Please reduce the rotating speed and feed speed stated above correspondingly.
- Make overhang of tool as short as possible in conditions of non-interference.

3. When the machine rigidity and workpiece fixture stability is low, vibration and abnormal noise may be generated. Please reduce the rotating speed and feed speed stated above correspondingly.
4. Make overhang of tool as short as possible in conditions of non-interference.

Maximum cutting depth

$\leq 0.1R (R < 0.5)$
 $\leq 0.2R (R \geq 0.5)$

1. Please select high-precision machine and tool holder. When vibration and abnormal noise occur during machining, please reduce axial cutting depth a_p .
2. Please use air blow or cutting liquid with high mist retardant property.
3. Reduce feed speed correspondingly when rotating speed is low.
4. Because machining conditions such as machine and allowance for machining may vary, please adjust the parameters based on actual requirements.

- The above table shows the standard value of side milling. When milling slot, 50%~70% of rotating speed and 40%~60% of feed speed stated above are recommended as standard.
- Please select high-precision machine and tool holder.
- Please use air blow or cutting liquid with high mist retardant property.
- Down milling is recommended in the case of side milling.
- When the machine rigidity and workpiece fixture stability is low, vibration and abnormal noise may be generated. Please reduce the rotating speed and feed speed stated above correspondingly.
- Make overhang of tool as short as possible in conditions of non-interference.

$\varnothing 3 \leq D$	0.2D																									

- The above table shows the standard value of side milling. When milling slot, 50%~70% of rotating speed and 40%~60% of feed speed stated above are recommended as standard.
- Please select high-precision machine and tool holder.
- Please use air blow or cutting liquid with high mist retardant property.
- Down milling is recommended in the case of side milling.
- When the machine rigidity and workpiece fixture stability is low, vibration and abnormal noise may be generated. Please reduce the rotating speed and feed speed stated above correspondingly.
- Make overhang of tool as short as possible in conditions of non-interference.

1. The above table shows the standard value of side milling. When milling slot, 50%~70% of rotating speed and 40%~60% of feed speed stated above are recommended as standard.
2. Please select high-precision machine and tool holder.
3. Please use air blow or cutting liquid with high mist retardant property.
4. Down milling is recommended in the case of side milling.
5. When the machine rigidity and workpiece fixture stability is low, vibration and abnormal noise may be generated. Please reduce the rotating speed and feed speed stated above correspondingly.
6. Make overhang of tool as short as possible in conditions of non-interference

Cutting parameters for GM series end mills

1. Please select high-precision machine and tool holder.
2. Please use air blow or cutting liquid with high mist retardant property.
3. Make overhang of tool as short as possible in conditions of non-interference.
4. Reduce feed speed correspondingly when rotating speed is low.

Maximum cutting depth																	

1. Please select high-precision machine and tool holder.
2. Please use air blow or cutting liquid with high mist retardant property.
3. Make overhang of tool as short as possible in conditions of non-interference.
4. Reduce feed speed correspondingly when rotating speed is low.

Maximum cutting depth	 Maximum $a_e=1.0\text{mm}$		 Maximum $a_e=0.5\text{mm}$		 Maximum $a_e=0.3\text{mm}$	

1. Please select high-precision and rigidity machine and tool holder.
2. When the machine rigidity and workpiece fixture stability is low, vibration and abnormal noise may be generated. Please reduce the rotating speed and feed speed stated above correspondingly.
3. Please use air blow or MQL (minimum oil mist cooling).
4. Down milling is recommended in the case of side milling.
5. Make overhang of tool as short as possible in conditions of non-interference.

Side milling

Slot milling

Length of cutting edge (overhang) and cutting edge diameter

The shorter of overhang is, the higher the rigidity is. Thus it is not easy to bend or vibrate in the cutting process, and machining precision is improved. When length of cutting edge (overhang) doubles, the Deflection degree (f) will be 8 times of the original.

When the overhang is reduced by 20%, the Deflection degree (f) will decrease by 50%.
When the diameter increases by 20%, the Deflection degree (f) will decrease by 50%.

$$f = \frac{F \cdot l^3}{3 \cdot E \cdot I} = \frac{F \cdot l^3 \cdot 64}{3 \cdot E \cdot d^4 \cdot \pi}$$

Feed rate selection table in profile machining by ball nose and R end mills

$$Ry = R \times \{1 - \cos[\arcsin(fr/2R)]\}$$

Technical information

Cutting parameters calculation

Symbol	Description	Formula
n	Rotating speed per minute $n[\text{min}^{-1}]/\text{r}/\text{min}$	$n = \frac{v_c \cdot 1000}{d \cdot \pi}$
v_c	Cutting speed $V_c[\text{m}/\text{min}]$	$v_c = \frac{d \cdot \pi \cdot n}{1000}$
f_z	Amount of feed per tooth $f_z[\text{mm}/\text{tooth}]$	$f_z = \frac{V_f}{z \cdot n}$
f	Amount of feed per rotation $f_z[\text{mm}/\text{rev.}]$	$f = f_z \cdot z$
V_f	Feed rate $V_f[\text{mm}/\text{min}]$	$V_f = f_z \cdot z \cdot n = f \cdot n$
Q	Removal rate $Q[\text{cm}^3/\text{min}]$	$Q = \frac{a_e \cdot a_p \cdot v_f}{1000}$
d_{eff}	Effective diameter of ball nose end mill $d_{\text{eff}}[\text{mm}]$ 	$\beta = 0$ $d_{\text{eff}} = 2 \cdot \sqrt{d \cdot a_p - a_p^2}$ $\beta \neq 0$ $d_{\text{eff}} = d \cdot \sin[\beta \pm \arccos(\frac{d - 2a_p}{d})]$
V_{eff}	Effective cutting speed of end mill $V_{\text{eff}}[\text{m}/\text{min}]$	$V_{\text{eff}} = \frac{d_{\text{eff}} \cdot \pi \cdot n}{1000}$
a_e	Radial cutting width $a_e[\text{mm}]$	
a_p	Axial cutting depth $a_p[\text{mm}]$	
d	Milling diameter $d[\text{mm}]$	
z	Number of teeth	
β	Inclined angle	

Common problems and solutions for end mill

Solutions Common problems		Tool material	Cutting condition						Tool shape			Machine clamping					
			Select coated end mill	Cutting speed	Feed rate	Cutting depth	Cutting direction (down / up milling)	Cutting liquid			Helical angle	Number of tooth	Milling diameter	Reduce the overhang length	Improve tool clamping precision	Change collet	Increase clamping force
Increase the amount of cutting liquid	Water-insoluble cutting liquid	Dry or wet machining															
Tool fracture	Fracture of end mill			↓	↓						↓	↑	✓		✓	✓	
Damage of cutting edge	Rapid wear of cutting edge	✓	↓	↑		down		✓				↑					
	Breakage		↓	↓	↓	down			dry			✓		✓			✓
	Severe chips bond	✓						✓	wet	↑							
Machining precision	Poor surface quality		↑	↓	↓			✓	wet					✓			
	Uneven			↓	↓					↓	↑	↑		✓	✓		
	Uneven side face of workpiece			↓	↓	up		✓		↑	↑	↑	✓				
	Burrs, breakage and slice frittering			↓	↓					↓							
	Large vibration		↓	↑						↑	↓	↑	✓		✓	✓	✓
Chip control	obstructed chip removal			↓	↓		✓				↓						
Others		1.Large abrasion of cutting edge is easy to cause fracture of end mill or poor surface quality, so it is recommended to regrind the end mills. 2.Make overhang of tool as short as possible.

 Customized non-standard order

Interchangeable modular endmills series

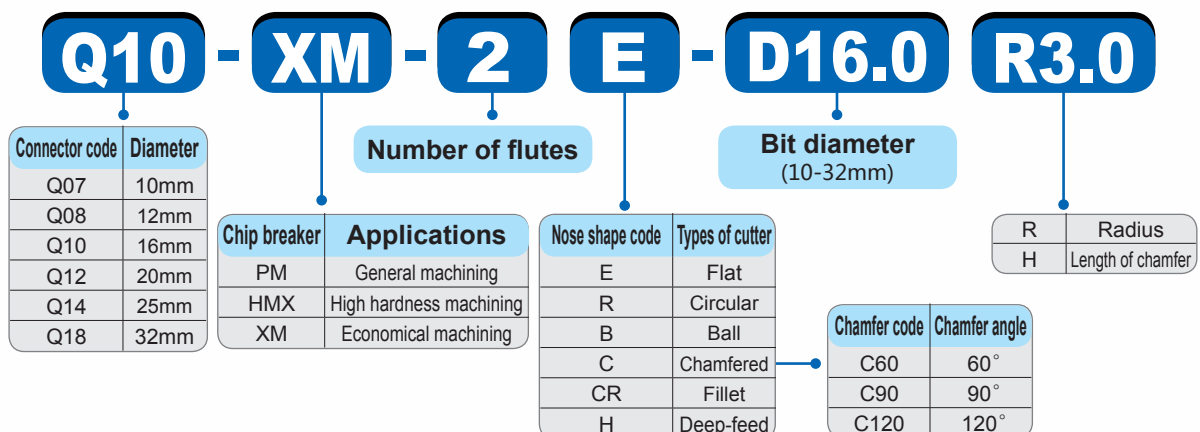

New series of interchangeable modular endmills combines the advantages of both solid carbide endmills and indexable toolholders together to achieve high-precision, high-rigidity, and high-efficiency machining.

- Solid carbide cutting head with high precision and consistency ;
- The self-centering screw thread ensures the quick replacement, high security and high strength ;
- Double positioning from both radial and axial direction guarantees the high rigidity, high stability and high-precision coupling ;
- Quick mounting on the machine tool would reduce the non-cutting time which would increase the productivity significantly ;
- Three cutting head series could share the shanks with the indexable inserts type interchangeable series which could satisfy face milling, slot milling, shoulder milling, profile milling, ramping and plunging from roughing to finishing different working conditions.

Interchangeable milling cutter

Interchangeable milling cutter

Tungsten carbide interchangeable cutting heads

Flattened endmills, Ball endmills, Radius endmills

Interchangeable shank

Selections of steel shank, carbide shank, and tooling system are suitable for long overhang, high feed rate and other working conditions.

Screw thread

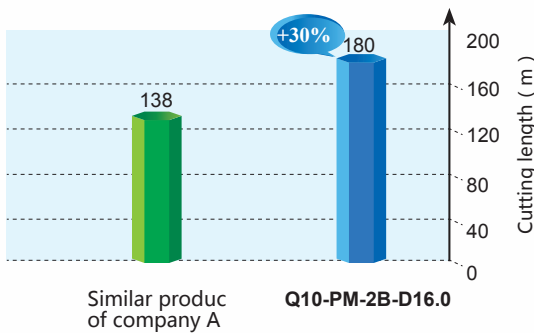

The screw thread with abundant surface contact at the curved surface with high precision which provides the outstanding precision performance and stability.

High-precision positioning surface

Assurance of the perfect combination of the shank and cutting heads.

Good rigidity, longer tool life

Workpiece material : NAK80(HRC40)
 Machining methods : Profile milling
 Interchangeable head : Q10-PM-2B-D16.0
 Toolholder : G16-QCH-Q10-150C
 Cutting method: Down milling, wet cut
 Machining requirement: $Ra \leq 0.6\mu\text{m}$,
 When $Ra > 0.6\mu\text{m}$ tool failure.
 Machine tool: Vertical Machining Center
 Cutting parameters : $V_c=250\text{m/min}$, $f_z=0.06\text{mm/z}$,
 $a_p=0.5\text{mm}$, $a_e=0.5\text{mm}$

Result: The interchangeable modular endmills has good rigidity and anti-vibration performance. Comparing with the similar product from company A, it has longer tool life and better efficiency.

High-precision and extraordinary surface quality

Workpiece material : 718H(HRC35)
 Machining methods : Side milling
 Interchangeable head : Q10-PM-4E-D16.0
 Toolholder : G16-QCH-Q10-120C
 Cutting method: Down milling, wet cut
 Machine tool: Vertical Machining Center
 Cutting parameters : $V_c=200\text{m/min}$, $f_z=0.06\text{mm/z}$,
 $a_p=8\text{mm}$, $a_e=0.4\text{mm}$

New series of interchangeable modular endmills with high precision and surface quality which has almost the same performance as the solid carbide endmills.

4-flute unequal pitch flattened end mill with straight shank

16	0.05 ~ 0.13			0.6 ~ 1.0			0.1 ~ 0.12		

1. Please adopt high precision machining center and shank holder.
2. Climb milling is recommended on side milling.
3. Please reduce the rev and feed rate if there are vibrations and abnormal noise under the circumstances of the bad rigidity of machine.
4. In the condition of interference-free, the extended length of milling cutter should be short as much as possible.

Cutting head installation instructions

- ▶ Use the clean cotton to remove the oil and dust on the interface cone, end face, and threads.
- ▶ While you are using your hands directly contact the cutting edges during clamping. It may cause injury, please use protective equipment.
- ▶ After installing the cutting head, if there is a gap between the cutting head and the end face of the shank, please use the wrench to tighten it until it fits completely.
- ▶ For strict operation requirements, please use the recommended torque to install the cutting head.

Remove the oil and dust
